AIM

To design and build a functional “Gym Membership Enrollment Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox — and to model the underlying data structure of a real fitness-center enrollment workflow through a properly sectioned form and an auto-generated report view.

PROCEDURE

1. Data Model Design

Before building the form, the data requirement was analysed and organised into a simple data model, grouping the thirteen Basic Fields under four logical sections that map to the stages of a member’s enrollment journey: Member Details, Contact Details, Membership & Fitness Preferences, and Scheduling & Health Declaration. Every field submitted through the form flows into a single auto-generated report, Membership_Enrollment_Report, which the front desk and trainers use to track and manage enrollments. The resulting data model is shown below.

Fig 1. Data Model — Membership_Enrollment_Form and its sectioned fields feeding Membership_Enrollment_Report

2. Application and Form Creation

1. Logged into Zoho Creator and clicked Create New Application → Create from Scratch.
2. Named the application “Gym Membership Enrollment & Front Desk Management” and confirmed creation, which opened the default blank workspace.
3. Inside the application, opened the Forms panel and clicked the + icon to add a new form, naming it Membership_Enrollment_Form.
4. This automatically created a linked report, Membership_Enrollment_Report, which will list every submitted enrollment request.

3. Drag-and-Drop of Basic Fields

In the Form Builder, the Basic Fields palette was expanded on the left panel. Each required field was dragged from the palette and dropped onto the canvas in the order needed, then double-clicked to open its Field Properties panel for renaming and configuration, as listed below.

Basic Field	Field Name Set	Drag-and-Drop Configuration
Name	Member_Name	Dropped onto canvas; enabled First Name / Last Name sub-fields.
Email	Email_Address	Dropped in Contact Details section; enabled built-in email format validation.
Address	Residential_Address	Dropped in Contact Details section; kept City / State / Pincode sub-fields.
Phone	Contact_Number	Dropped in Contact Details section; set country code format to India (+91).
Single Line	Emergency_Contact_Name	Dropped in Contact Details section; set as free-text entry for emergency contact.
Multi Line	Fitness_Goals_Medical_Notes	Dropped in Membership & Fitness section; expanded text area for goals / medical notes.
Number	Age	Dropped in Member Details section; range restricted to 14–75.
Date	Preferred_Start_Date	Dropped in Scheduling section; past dates disabled via date-picker settings.
Time	Preferred_Workout_Slot	Dropped below Preferred Start Date; default time format kept as 12-hour.
Drop Down	Membership_Plan	Dropped in Membership & Fitness section; choices list populated with plan categories.
Radio	Membership_Type	Dropped in Member Details section; three mutually exclusive options added.
Multi Select	Preferred_Activities	Dropped below Membership Plan; multiple activity choices added for multi-pick.
Checkbox	Health_Declaration_Waiver	Dropped in Scheduling section; marked mandatory so the form cannot submit unchecked.

4. Organising Fields into Sections

To keep the form member-friendly and logically grouped, a Section field was dragged from the Layout palette above each group of related fields, and the dropped fields were dragged again to nest them under the correct section header. Four sections were created in this way:

- Section A — Member Details: Member Name, Age, Membership Type.
- Section B — Contact Details: Email Address, Contact Number, Residential Address, Emergency Contact Name.
- Section C — Membership & Fitness Preferences: Membership Plan, Preferred Activities, Fitness Goals / Medical Notes.
- Section D — Scheduling & Health Declaration: Preferred Start Date, Preferred Workout Slot, Health Declaration Waiver.

Each section header was renamed by double-clicking it and typing the section title, and fields within a section were reordered using drag handles until the layout matched the intended member journey from identity to health declaration.

5. Applying Field-Level Validations

1. Selected Member_Name, Contact_Number, Age, Membership_Type, Membership_Plan, and Health_Declaration_Waiver one by one and enabled the Mandatory toggle in Field Properties.
2. Opened Email_Address properties and confirmed the built-in email format validation was active.
3. Opened Contact_Number properties and set the phone format to the Indian country-code pattern.
4. Opened Age properties and set Minimum Value = 14 and Maximum Value = 75.
5. Opened Preferred_Start_Date properties and restricted selectable dates to today and future dates only, disallowing past dates.
6. Confirmed under Health_Declaration_Waiver that the Submit button remains disabled until the checkbox is checked.

6. Preview and Deployment

1. Clicked the Preview icon in the Form Builder toolbar to view the live member-facing form and verified that all four sections render in order with correct field types.
2. Filled and submitted a sample enrollment through the preview/live form to test validations and generate report data.
3. Opened Membership_Enrollment_Report from the Reports panel and verified that the submitted record appears with values mapped correctly to each field.
4. Reviewed filter options on Membership Plan and Preferred Start Date in the report view to confirm the front desk can sort and onboard new members.

OUTPUT

The following screenshots capture the completed application: the Form Builder showing all thirteen Basic Fields arranged into four sections, the live member-facing form preview, and the Membership_Enrollment_Report containing a sample submitted record.

3. Membership_Enrollment_Report — Sample Submitted Record

The screenshot displays a Zoho Creator interface for a 'Gym Membership Enrollment & Front...' application. On the left, a dark sidebar contains a menu with 'Member_Name' and 'Member_Name Report' (highlighted in blue). The main area shows a 'Member_Name Report' table with the following data:

Member_Name	Membership_Type	Email_Address	Contact_Number	Residential_Address	Emergency_Contact_Name	Age
Jashwanth s	New Member	jashwanthsundarajan.2024.csbs@rajalakshmi.edu.in	+919993222222	plot 6, avenue street, chennai, tamilnadu, 600073	pravin	18

At the bottom left of the table area, it says 'Showing 1 of 1'. The bottom of the screen shows a user profile for 'JASHWANT...'.

RESULT

A Gym Membership Enrollment Form application was successfully designed and built in Zoho Creator using all thirteen Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox. The fields were logically grouped into four sections through drag-and-drop, mandatory and format-level validations were configured successfully, and the Membership_Enrollment_Report was verified to correctly capture and list member enrollment data submitted through the form. The exercise thus demonstrated an understanding of data modelling and low-code form design for a real business use case.
